

Project Management

FACTSHEET

Project Management

Overview

Within Aptuit Project Management we offer a comprehensive and tailored management service to assist you with the progression of your compound through the development stages. We provide you with a single point of contact for your development package from lead optimisation to phase IIa. The aim of this service is to manage the various steps within the life cycle of your project across disciplines from initiation, through planning, execution and controlling to close out.

The Service

The project manager is responsible for maintaining a cohesive and highly effective project team during all phases of the project. The project manager will serve as the primary point of contact for the team and will ensure that open lines of communication are established and maintained throughout the project lifecycle. In addition to these responsibilities, the project manager will:

- Strive to understand the client's goals and will manage the strategy to meet those goals
- Lead the performance of the project tasks per the agreed upon scope of work
- Act as the focal point for all internal and external project communication
- Schedule, monitor and communicate the status of the project tasks to the project team
- Conduct team meetings
- Generate and distribute concise meeting minutes, action items and status reports
- Prepare the overall project and communication plan with the assistance of the project team
- Monitor the compliance to the project plan and update the plan as needed
- Ensure the project team members are focused on a common set of objectives
- Ensure that the project objectives and deliverables have been met on time

Areas of Expertise

We have outstanding expertise covering a broad range of non-clinical

and pharmaceutical disciplines, a range of therapeutic areas, and different classes of compounds including:

- Safety Pharmacology Packages
- Tailored Toxicology Development Programs
- Drug Metabolism to support Discovery and Development for candidate drugs
- Preclinical and clinical bioanalysis and pharmacokinetics
- Pharmaceutical sciences (formulation development, analytical method development, clinical supply manufacture, release testing)
- ICH Stability studies
- Scale up Clinical supplies manufacture and distribution
- Full Integrated Drug Development Programs

Our experienced project managers can support your entire development program or smaller projects tailored to your exact requirements.

Aptuit Consulting

Aptuit is focused on streamlining and supporting the drug development process for biotechnology and pharmaceutical innovators worldwide by providing a comprehensive suite of drug development services and competencies. Aptuit consultants will work with the client's development team members and become intimately involved with the challenges of developing the new product. Based on their experience, access to thought leaders, knowledge of the FDA, and other international market regulations, and familiarity with Aptuit's and other outsourced technical services, Aptuit consultants are able to have a meaningful impact on the client's project.
