

## Clinicopia Connect

### FACTSHEET

## The One Source for All Your Clinical Supplies Data

Today's clinical supply chain is complex and extends across many vendors, locations and systems. Clinicopia Connect is a tool that allows companies to combine data from disparate sources into a single, consolidated location. Clinical supply managers will now be able to access a comprehensive view of their clinical inventories and work orders, allowing them to make better planning decisions. Clinicopia Connect will also provide a single source for the lot genealogy, tracking and tracing information supporting regulatory compliance and filing.

### Visibility Over the Extended Supply Chain

Clinicopia Connect provides an easy-to-use, web-based tool that clinical supply planners and managers can access to see their clinical

inventories and data across the numerous vendor and clinical locations. Through simple security configurations, the tool can allow clinical study managers, biostatisticians, vendor staff, investigators and other users to access the information they need to manage their parts of the supply chain without compromising blinding information.

### Enabling More Informed and Quicker Planning Decisions

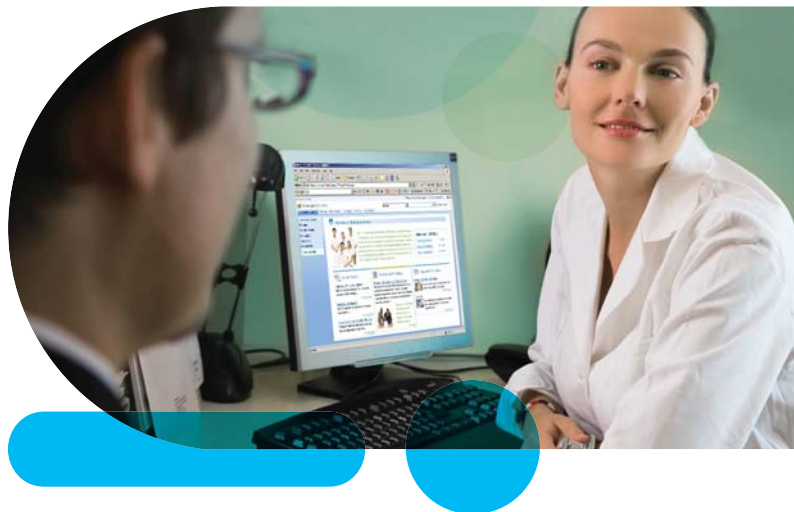

Clinicopia Connect will provide the consolidated data that planners and managers need to make informed decisions in the rapidly-changing clinical trial environment. A single view across all vendors, locations and sites allows planners to see the comprehensive status of their inventory levels, work orders and shipments and quickly make adjustments in response to changes in enrollment and clinical trial plans.

The screenshot shows the Clinicopia Connect web portal. At the top, there is a navigation bar with tabs for 'Clinicopia Connect', 'Planning', 'Manufacturing', 'Packaging', 'Inventory', and 'Distribution'. A search bar on the right contains 'All Sites' and an 'Advanced Search' button. The main content area is titled 'Welcome to Clinicopia Connect' and features a large image of a diverse group of healthcare professionals. Below this, there are several informational boxes: 'Latest News' with links to 'Clinicopia User Group Update', 'Need Specific Report?', and 'Streamline Clinical Supplies Process?'; 'On-Demand Training' with a link to 'Recorded Trainings—Get Started Now!' and a list of review topics; and 'Support & Services' with links to 'Frequently Asked Questions' and 'Services'. A 'What's New in the Portal' box on the right lists recent updates like 'Create Adhoc Reports' and 'View Formulation Data'.

## Clinicopia Connect

### FACTSHEET

## The One Source for All Your Clinical Supplies Data... cont'd

### Easy Access to Regulatory Reports

Centralizing and organizing clinical supply data for regulatory filing is currently a laborious process. It typically entails generating reports and outputs from numerous disparate systems and manually combining them into a spreadsheet or database to produce the final report. By consolidating the data into a single repository, users will be able to go to one source and run one report that satisfies their needs. Clinicopia Connect will also enable sponsors to quickly locate, track and trace lots should the need arise.

### Communicate Reliably With Your Vendors

Clinicopia Connect enables documented communication between sponsors and vendors. With requests logged and tracked by both parties, users will no longer need to rely upon emails, faxes and other transient communications which may be lost or deleted.

### Clinicopia Connect Datamart

The datamart is the repository that collects data from multiple sources: in-house inventory management systems, vendor supply systems, IVRS, CTMS and other systems.

The data is imported and transformed into the appropriate fields in the datamart which then can be displayed in a single view to the users.

The Clinicopia Connect datamart is available with standard adapters that enable automatic population of data from the Clinicopia Supply Management system as well as other modules in the Clinicopia Suite of products.

Aptuit Informatics can also provide standard file and message formats for the import of data from other supply chain systems.

Custom adapters can also be easily configured to enable the import of data into the datamart from other custom and legacy systems.

### Clinicopia Connect Portal

The Clinicopia Connect portal front-end provides a consolidated view of the datamart. This web-based tool provides dashboard views and graphical search capabilities to easily locate information and view it in a meaningful format. With a simple user interface, the portal is both easy to use and welcoming to new users.

### Reports That Meet the User's Needs

Users often struggle with getting reports from different systems that are in different formats with different data or requiring different query syntax. The Clinicopia Connect portal will provide a suite of standard reports as well as capabilities that will allow users to design their own report formats, ensuring that all data is viewed and reported in a single format.

### Helping Big and Small Pharma and Biotech

Whether your company outsources 100% or works in-house, Clinicopia Connect can provide your enterprise with the solution you need. By combining data from vendors as well as in-house and legacy systems, Clinicopia Connect is a valuable tool no matter what the size of the company. Aptuit Informatics provides a variety of usage options from in-house installation to a fully hosted solution. Flexible licensing models are also available based upon the anticipated type of usage.

### Making the Extended Clinical Supply Chain Manageable

Contact Aptuit Informatics today to find out more about how Clinicopia Connect can link together the various components of your extended supply and allow you more control over your data.

### Key Features:

- Easy-to-access single source repository for Clinical Supplies data
- Ability to import data from sources across the entire extended supply chain
- Standard adapters for commonly used systems (such as Clinicopia Supply Management)
- Submit and track requests between sponsors and vendors
- Quick and easy reporting tools
- Available as a hosted solution

### Additional Aptuit Capabilities

Aptuit offers a comprehensive suite of drug development services that range from candidate selection through to market, including consultancy services, API development and manufacture, preclinical and clinical technologies, pharmaceutical services, large and small scale manufacturing, IVRS, and clinical packaging and logistics, across a wide range of compounds, dosage forms and delivery systems.
