

Fully Web-Integrated Interactive Voice Response System (IVRS/IWRS)

FACTSHEET

IVRS/IWRS Capabilities

Aptuit offers the most advanced fully web-integrated IVR system in the industry.

System Highlights

Rapid Deployment

- Fully web-integrated IVRS can be launched as quickly as 4-6 weeks from specifications approval

Complete Web-Integration

- Perform transactions over the phone or the web

Advanced Real Time Reporting:

- Customized graphical and tabular reports with drill down and filtering
- Create unlimited reports at any time and export data to your desktop with the ad-hoc report builder

24 Hour Support

- 24/7 technical support included with every system

Key Benefits

Reduced Drug Waste

- Dramatic reduction of drug overage in a clinical trial, providing significant costs savings

Flexible Clinical Site Management

- Site management activities such as site activation/deactivation and adjusting screening/randomization limits can be done instantly on the web
- Drug supply parameters such as trigger levels, buffer levels, and visit projection windows can be adjusted as needed throughout the course of the study

Implementation of Complex Randomization Schemes

- Aptuit IVRS Powered By Oracle Health Sciences, allows easy implementation of complex randomization schemes, such as
- Multi-factor stratification
- Dynamic allocation algorithms
- Adaptive trial designs for changing randomization schema mid-study

Tight Control Over Drug Supply

- Unparalleled level of control over drug supply management, such as
 - Creating and adjusting drug supply strategies
 - Handling lot expiration at depot and site levels
 - Managing temperature excursions for cold-chain products
 - Handling drug returns and reconciliation

Clinical Supplies Forecasting Module

The forecasting module can forecast clinical supply demands in real time pre and post study go-live. With this web based tool, clinical supply managers can obtain data in minutes and run an infinite number of “what if” scenarios directly from a desktop. Using predictive algorithms, the tool determines how much drug supply will be needed for each region, country, and depot. Once the study is live on demand links can compare actual trial progress versus the projected status.

Additional Aptuit Capabilities

Aptuit offers a comprehensive suite of drug development services that range from drug discovery through to market, including consultancy services, API development and manufacture, preclinical technologies, clinical sciences, pharmaceutical development services, large and small scale manufacturing, IVRS and clinical packaging and logistics, across a wide of compounds, dosage forms and delivery systems.
