

Fusion

FACTSHEET

Your Clinical Supplies Data - On Demand

At Aptuit we understand the need for information on demand to manage Clinical projects. Fusion represents a significant step forward of Aptuit's collaboration and reporting functionalities, providing a fully collaborative platform for individuals to work together and find the information they need enabling better communication to achieve common business goals. Advances in online reporting technologies now enable the end-user to extract the information they want, when they want, allowing up to the minute data to be shared on-line, in a robust, secure environment. Information can be provided as either blinded or un-blinded data per study, per user.

Finished Kit Inventory

Having inventory information on hand is imperative to the success of any clinical study. Fusion provides full inventory details of all finished kit inventory supplies across the Aptuit network, irrespective as to whether the supplies are packaged in-house or packaged externally. Drill-down capabilities provide detail down to each individual kit; high-level information for one or more studies can equally be easily extracted at the click of a button.

Shipment Tracking

Shipment tracking is key to ensuring drug product is delivered properly and on-time. Bespoke integration links established with all major courier operators across the globe (FedEx, DHL, TNT, Marken, World Courier), allows Fusion to provide this information for each and every shipment made. This allows for CRO's and Investigators to quickly establish delivery status of one or more shipments across multiple studies, with the ability to view kit level information if required.

Analyze Your Data Further

Should further data analysis be required, Fusion offers a number of different data export formats including CSV (Comma Separated Values), XLS (Microsoft Excel) and XML (Extensible Mark-up Language). This allows data to be easily uploaded into client specific applications, databases or spreadsheets. This is valuable to clients who may wish to merge with other clinical data, either from their own systems or from other Clinical Supply providers.

Key Features:

- Secure, Robust web based solution
- Online collaboration capabilities using Microsoft technologies
- Report on Finished Kit Inventory across studies and sites
- Track Shipments managed by all major courier operators
- Export Capabilities to CSV, XLS, XML & more
- Available 24/7 with regular updates from core operational Distribution
- Inventory Management systems throughout business hours

Additional Aptuit Capabilities

Aptuit offers a comprehensive suite of drug development services that range from drug discovery through to market, including consultancy services, API development and manufacture, preclinical technologies, clinical sciences, pharmaceutical development services, large and small scale manufacturing, IVRS and clinical packaging and logistics, across a wide range of compounds, dosage forms and delivery systems.
